

I HAD THE GRIP SEVERELY.

Was in Feeble Health, Could Just Drag Around.

A Consultation of Three Doctors Gave Me Up to Die.

Physicians Recommended Dr. Greene's Nervura, and It Cured Me.

Mr. S. N. Miller, Rutherford, N. J., says: "I had the Grip very severely. I was in very feeble health. I could not sleep at night, and could not just drag around; in fact, I gradually grew worse and was about used up. Finally, I had a shock, and that finished me. My whole right side was paralyzed, and I was as helpless as a child for a long time. I could not sit up or help myself. A consultation of three doctors gave me up, saying that they could do nothing more for me. My husband went straight to the drugstore, who was also a doctor, and had doctor me, and was at the con-

sultation, and asked for a bottle of Dr. Greene's Nervura. He stopped and thought a moment, and then said: 'That will help your wife, I know it will.' He bought a bottle and I can truly say that I am rejoiced at the results. I can now walk about quite comfortably and do my own work, get into a carriage, and am far better than I ever expected to be, all of which I attribute to Dr. Greene's Nervura.

Dr. Greene, 25 West 14th st., New York City, can be consulted free, personally, or by letter at any time.

Your Rupture

Is a source of constant worry and occupies your mind. I have invented a system of trusses, with which I can hold any rupture, no matter how large or long standing, with the greatest ease and comfort. From the very moment my patient begins to feel better, he is safe and comfortable. In a few hours the presence of the truss is forgotten. Your rupture trouble is dispelled and disappearing forever. I don't bind you up with elastic belts, leg straps or body supports, which cut painfully into the flesh. I leave your hips and spine free. My truss is light, waterproof and may be worn in the bath.

Have you not found that speculating in trusses and "methods" is costly? When you apply to me you have the assurance that I can handle your case understandingly. The cure of rupture depends on your faithfully obeying a few simple instructions in connection with my truss. Write, or better, call, for free information (sent by mail). Exhibition free. Established 1871.

CHARLES CLUTHE, 29 EAST 14TH ST., Between 5th Ave. and Union Square, New York. We have a perfect system of fitting by mail.

At our warerooms you can always find a large assortment of Pianos from which to make a selection. We have new pianos from \$210 to \$600.

for cash or on easy monthly payments. A quantity of slightly used and odd style pianos at greatly reduced prices. A number of second-hand Squares and Uprights, terms—

\$3 to \$5 per month.

Orders for Tuning and Repairing will receive prompt attention. Pianos rented and exchanged. Send for Illustrated catalogue.

NEEDHAM, Fifth Avenue and 15th Street.

DR. RHODES' HAIR RESTORER. DON'T BE BALD. Dr. Rhodes' Hair Restorer is a powerful cure for all cases of baldness, thinning hair, and itching scalp. It is a pure, natural, and safe preparation, and will restore the hair to its natural color and growth. Price, 50 cents. Dr. Rhodes' Hair Restorer is sold by all druggists. Send 4 cents for catalogue. Dr. Rhodes' Hair Restorer is sold by all druggists. Send 4 cents for catalogue.

AN EXCELLENT TONIC FOR La Grippe & Influenza, THE GENUINE

DR. BLAUDS PILLS. A PURE AND CHEAP SUBSTITUTION. "BLAUDS" PILLS are sold by all druggists. E. FOUGERA & CO., Sole Importers.

TANSY PILLS. Dr. Caton's Tansy Pills are a powerful cure for all cases of constipation, indigestion, and general debility. They are a pure, natural, and safe preparation, and will restore the system to its normal state. Price, 50 cents. Dr. Caton's Tansy Pills are sold by all druggists. Send 4 cents for catalogue.

HOW THE GREAT BICYCLE RACE WAS WON AND LOS.

Leaders in the 24-Hour Sprint Set a Pace That Forced Every Laggard to Quit.

Leaders in the 24-Hour Sprint Set a Pace That Forced Every Laggard to Quit.

Six men rode for twenty hours at the head of the bicycle racers in Madison Square Garden without one being able to gain a lap on the others. Frederick, Pierce, Stephens, Gimm, Turville and Lawson were all the time within four hours of the finish.

They and Miller, who was ten miles behind, travelled like a road party, keeping together as if running ahead was contrary to the ethics of the game. Every one of them dreaded the result of taking the lead. They resisted the temptation with few exceptions, and so hour after hour they rode around the big wooden soap plate like the pellets of one load of buckshot.

Sprinting Was Bad Form. Stephens was the greatest discourager of sprinting. He made it his business to play bloodhound on the trail of anybody who sought to disturb the even tenor of the pace.

Miller was frantically anxious to make up his lost ground, and repeatedly slipped up to the top of the steep track and rushed down into the lead, but nearly as often Stephens and Pierce and Gimm flew as fast and fastened themselves doggedly just behind him until he would relinquish his ambition and let his pace come back to the steady mile-in-three-minutes which was permitted. Occasionally they would let Miller go ahead and gain a lap, but his privileges in this connection were very sparingly granted. Four laps were all

they would permit him to make up during the afternoon.

Gimm, too, had sporadic ambitions, but the tactics that held Miller behind were equally potent against him. Stephens and Pierce, too, had a notion of leaving him, but the advantage of a lead of a single lap from which to start on the grand final sprint which they all knew must come.

The Final Rush. The last grand rush, though long delayed, was inevitable, and gradually the riders realized that they must be content to preserve the tie and race it out to a finish. Stephens and Gimm were the favorites.

A Wonderful Work.

Prof. L. A. Harraden, the greatest Hypnotist of the century, has just issued an elaborate and exhaustive TREATISE, covering the whole ground of his science, which is creating little less than a sensation. It is a most valuable work and is devoted entirely to explaining the mysteries and secrets of that marvelous power, Hypnotism. The book is profusely illustrated, containing hundreds of beautiful and artistic engravings, and makes plain to everybody how Hypnotism improves health, competence and social reputation, how it cures disease, conquers pain, whores, and makes happy homes, and gives endless recreation to public or private life. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of cast iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of wrought iron was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of iron and steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of coal was 208,500,000 short tons, about \$800,000,000 more than in 1897. The production of iron was 20,450,000 short tons, about \$217,000,000 more than in 1897. The production of steel was 10,450,000 short tons, about \$117,000,000 more than in 1897. The production of pig iron
